

Patients Deserve Better Than Treatment Delays

Breakthrough medicines are revolutionizing how we fight disease, but when red tape – like prior authorization and step therapy – delay patients' access to these treatments, patients are unable to realize the full benefits of these medicines. Delays in treatment can lead to higher costs and harmful patient outcomes.

One in three children with epilepsy experienced a delay in starting a new treatment due to prior authorization

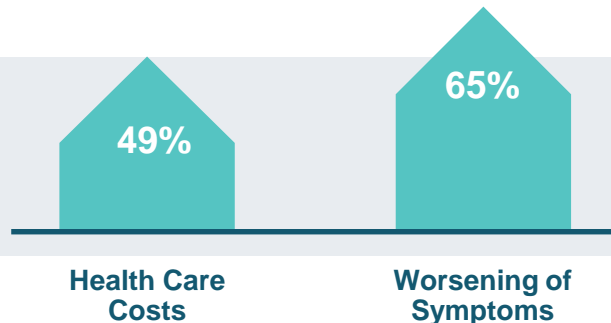

38% of kids who faced a delay missed a dose

64% of kids who missed doses experienced worsening of seizures

Patients' COPD-related Outcomes from Delayed Access to Treatment

When patients with COPD experience delays in treatment, it results in:

Delayed treatments for HIV/AIDS are associated with 57 percent poorer health outcomes
