

# WEST VIRGINIA'S 2016 EXCHANGE PLANS

Potential Size of Exchange Market: **About 101,000 West Virginia residents.**<sup>1</sup>

## Improving Exchange Coverage in West Virginia

State oversight can ensure that coverage meets the Affordable Care Act's standard of providing coverage similar to what is typically offered by employers. West Virginia has chosen to enter into a partnership model with the federal government in which the state reviews health plans that wish to participate in the exchange. West Virginia can protect its residents by:

- Enforcing non-discrimination requirements, which apply to benefit design and provider networks; and
- Advocating to CMS for a healthcare.gov website that allows for consumers to compare plans using personalized out-of-pocket cost calculations that reflect plan formularies and provider networks.

## Key Facts about 2016 Health Plans in the West Virginia Exchange:

### Deductibles

- Exchange plan coverage is supposed to be consistent with employer-sponsored insurance<sup>2</sup>—the vast majority of which covers prescription drugs immediately.<sup>3</sup>
- In contrast, most exchange plans require that patients either meet a combined deductible for all medical spending—including prescriptions—or have a separate deductible just for prescription drugs. West Virginia has the same percentage of silver plans with a combined deductible as the national average (63%).

Average Annual Deductibles in Silver Plans:  
West Virginia Plans Compared to U.S. Average<sup>4</sup>

### Cost Sharing

- Prescription drug cost sharing is often a monthly expense for those with a chronic condition. Cost sharing for medicines can quickly become burdensome for those with high monthly costs.
- Coinsurance generally becomes more common on higher cost sharing tiers.
- In West Virginia, 88% of plans require copays for preferred brand drugs and those copays average \$50. For specialty tier medicines in the West Virginia exchange, coinsurance is required in 100% of cases and the average coinsurance is 43%.<sup>5</sup>
- Patients under 250% of poverty (about \$30,000 for an individual) in exchanges typically qualify for cost sharing subsidies that lower their out-of-pocket costs for silver plans. However, plans have flexibility in how they implement these subsidies, and many plans still have coinsurance levels of more than 30% for higher formulary tiers.<sup>6</sup>

Health plans on West Virginia’s Health Insurance Exchange are required to cover “Essential Health Benefits” established by federal regulation. Prescription drug benefits are evaluated in comparison to West Virginia’s benchmark health plan, which sets the standard for how many medicines exchange plans must include on their formularies. Under the counting rules defined by federal regulation, West Virginia’s benchmark plan governing 2016 plans covers 99% of medicines that were available when the benchmarks were originally selected. Starting in 2017, plans will have to meet a new benchmark

that covers 88% of drugs that were available when these benchmarks were selected.<sup>7</sup> The regulations allow health plans significant leeway in designing formularies to meet a state’s benchmark standard. It is important that states review formularies for compliance with established benchmarks and non-discrimination protections because current federal rules for “counting” prescription drug coverage may allow plans to effectively cover fewer drugs than a state’s benchmark and typical employer plans.

## State review of exchange plan formularies is important because:

-  Federal count-based standards related to the number of medicines a plan must cover do not extend to cost sharing. Even if a medicine is covered, it may still be unaffordable. If therapeutic alternatives are not available on a lower cost sharing tier, the benefit design may be discriminatory.
-  Federal counting rules do not provide an incentive to cover combination therapies and extended release medicines.<sup>8</sup> These medicines play an important role in patients sticking to and benefiting from the treatments they need.
-  There are no rules to ensure consistent coverage or counting of medicines typically included in the medical benefit—these medicines often treat serious conditions such as cancer and neurologic diseases.

## Based on an analysis of actual 2016 exchange plan formulary information in West Virginia, the following key findings are of particular importance to West Virginia residents:<sup>9</sup>

An average of **83%** of brand medicines are covered across a range of key drug classes in the West Virginia exchange. The national average is **82%** of brand medicines covered in exchange plans.

An average of **88%** of plans in the West Virginia exchange placed all of their drugs in at least one class on the specialty tier. The national average is **80%**. The conditions most likely to be subject to this type of formulary design are cancer, MS and HIV/AIDS.

An average of **19%** of brand drugs have a coinsurance of 30% or higher in the West Virginia exchange, compared to a national average of **27%** of brand drugs having coinsurance of 30% or higher.
